

Altimetry Derived Virtual Tide Gauge : Offshore Bangladesh

MARUFA ISHAQUE
Department of Oceanography
University of Dhaka

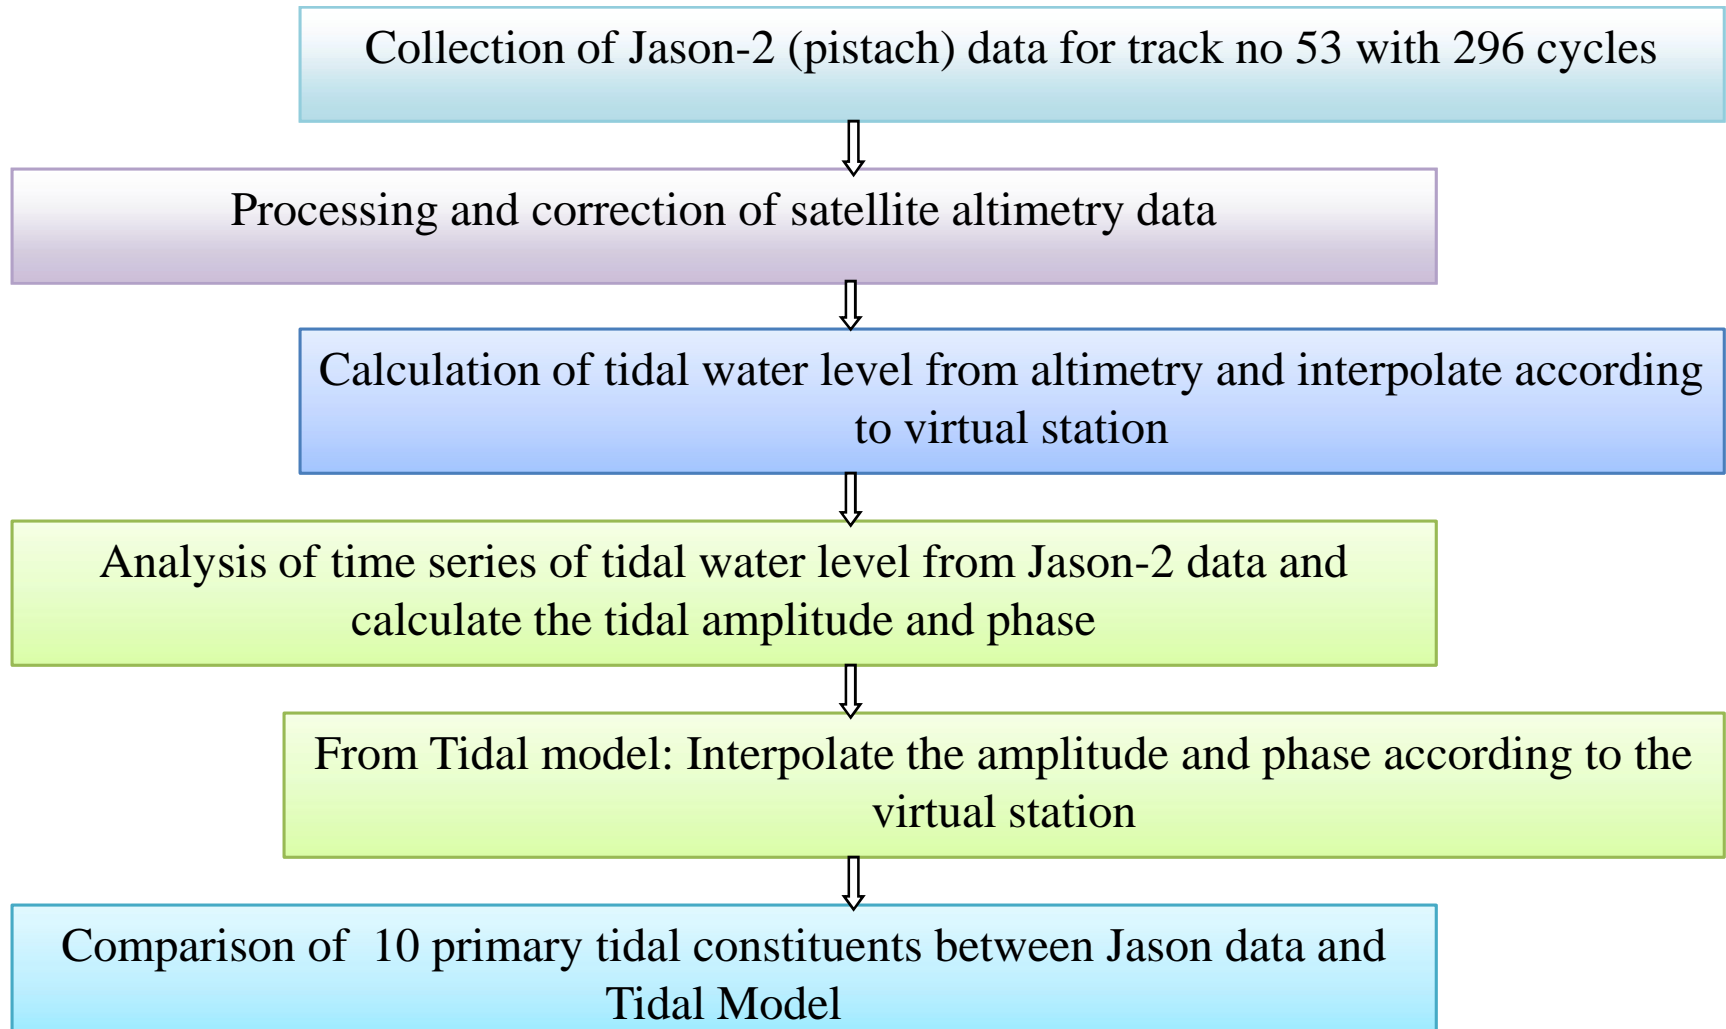

UNDER THE GUIDANCE OF

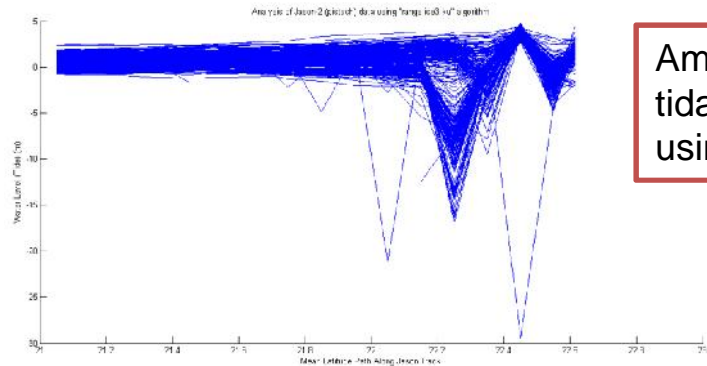

**INDO - FRENCH CELL FOR
WATER SCIENCES (IFCWS)**

Indian Institute of Science,
Bengaluru, India

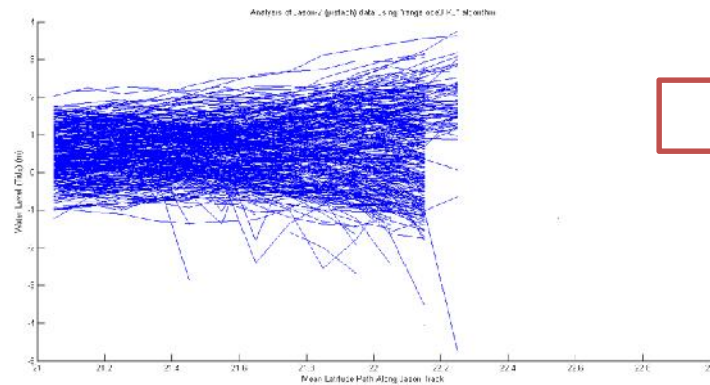

METHODOLOGY

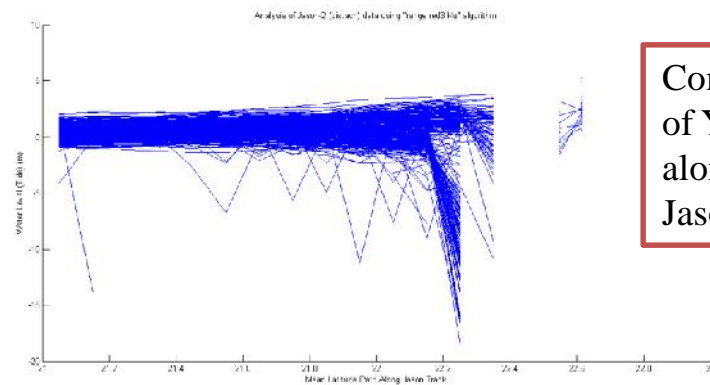

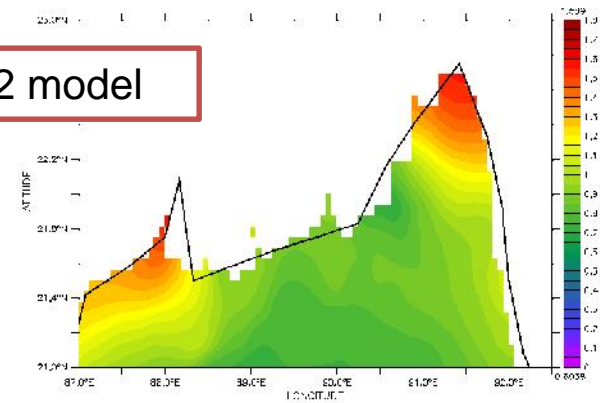

Softwares used: Matlab, MAPS, Ferret and Detidor

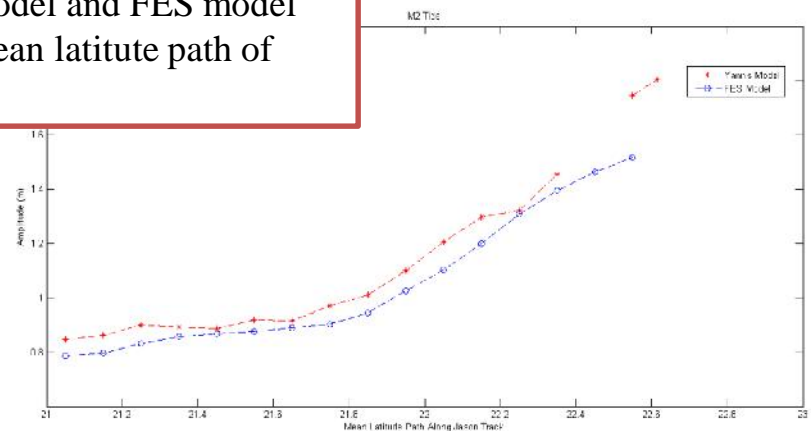

Amplitude of M2 tidal component using tidal model

FES2012 model

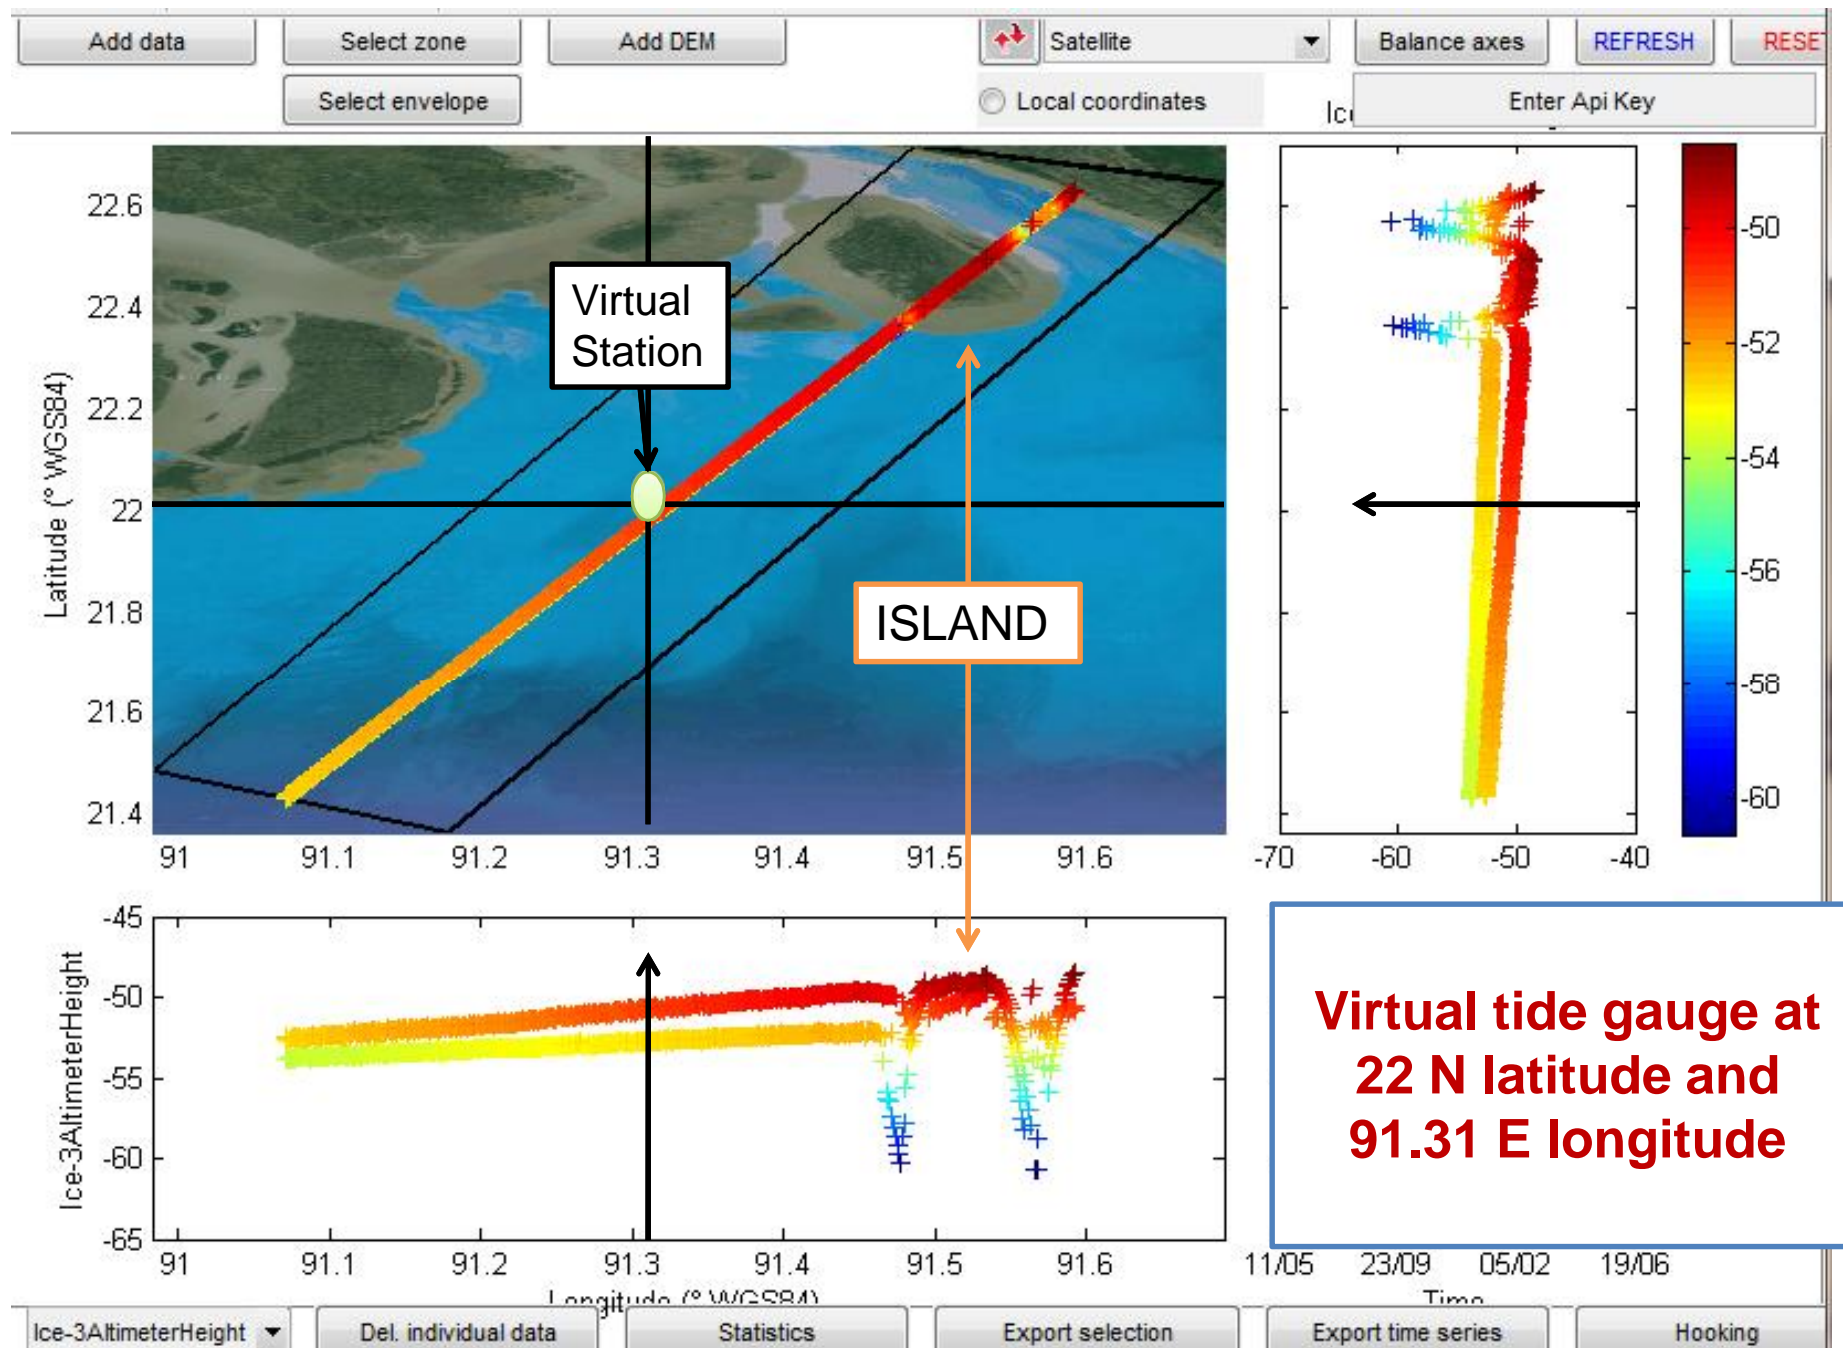

Comparison of M2 tidal amplitude of Yann's model and FES model along the mean latitude path of Jason track

Different retracking algorithms for the analysis of Jason-2 (pistach) data

Time series of tidal water level from Jason-2 data

Calculation of tidal water level = altimeter height - range - (propagation correction + geophysical correction) - geoid

Comparison between

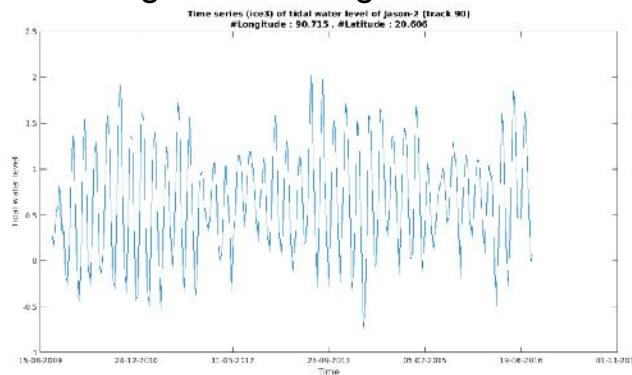

Jason-2 Data
and
Tidal Model

For each tidal component
(e.g., M2) = amplitude
(M2) \times cos (wt + phase
(M2))

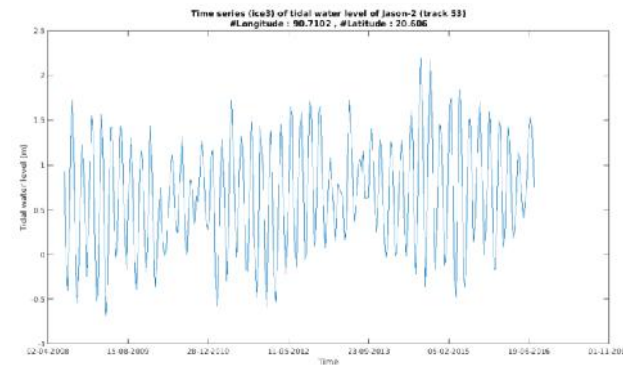

Google earth image of track 90

Time series of tidal water level at 20.606 lat, 90.715 lon (B3)

Google earth image of track 53

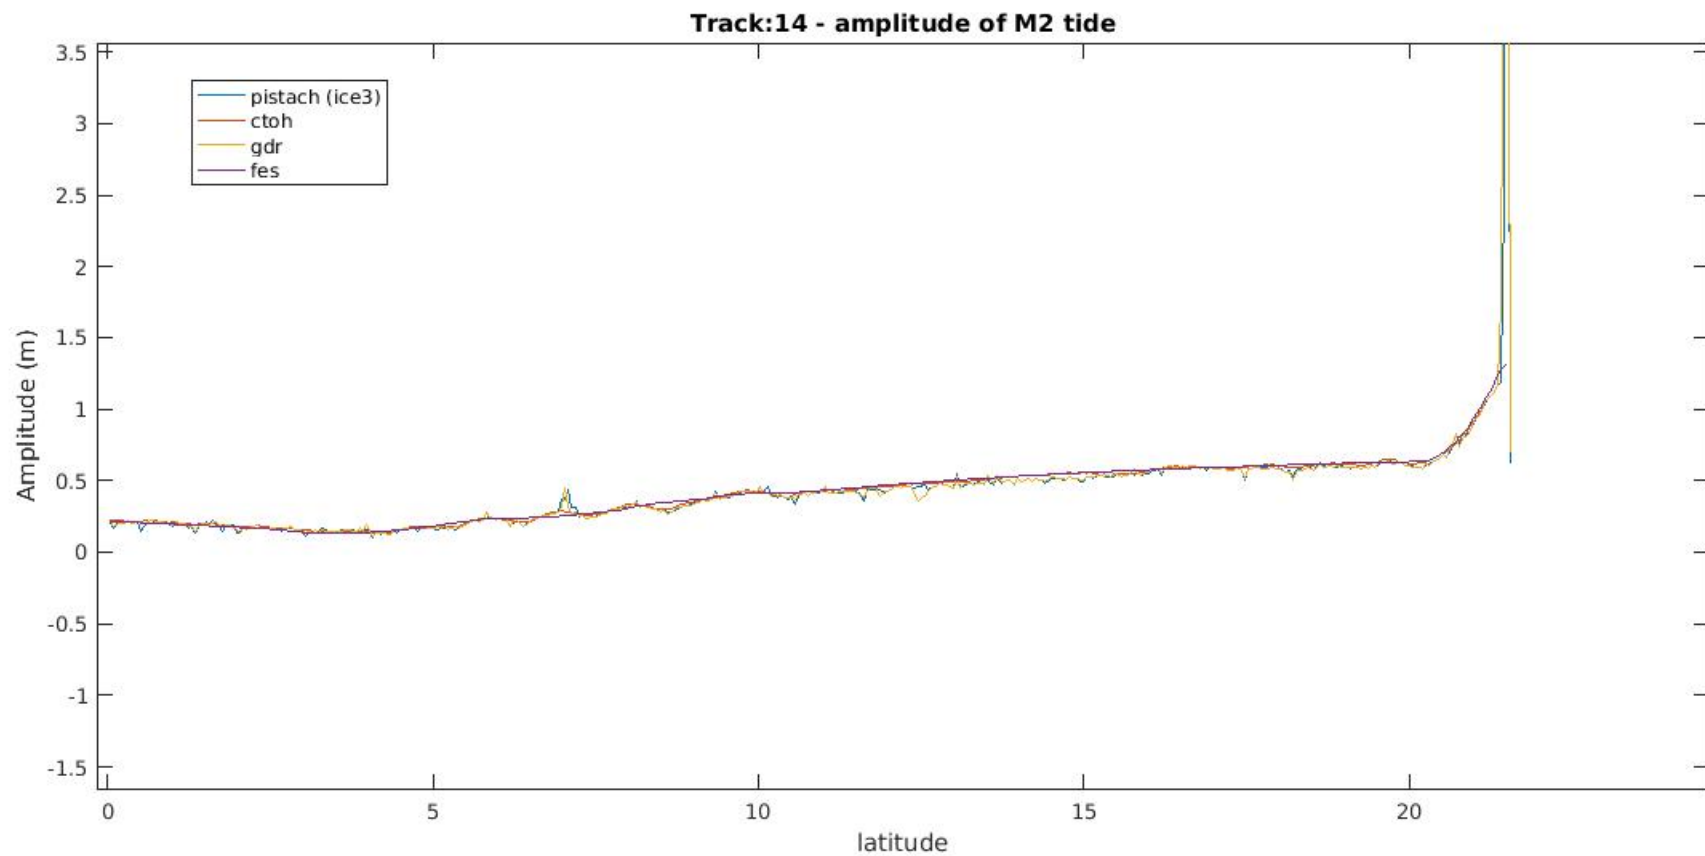

Time series of tidal water level at 20.606 lat, 90.7102 lon (C3)

Comparison of tidal amplitude between track 53 and track 90 at intersection point (C3 and B3)

Comparison of M2 tidal amplitude among different Jason-2 products and FES model

THANK YOU
